

## US DoD department selects Garrison to deliver mission capabilities

*Garrison delivers Transformational Cross Domain Solutions*

For the US Department of Defense, embracing innovation is critical to ensuring ongoing mission effectiveness. A part of the DoD has selected hardware-based Garrison SAVI® Isolation Appliances to enable access to untrusted content while ensuring that their security requirements were met, crucially, without sacrificing user experience.

### Solution stack

Garrison SAVI®  
Isolation Appliance

Garrison SACS®  
Transfer Appliance

Garrison's enterprise-ready appliances are easily installed in existing data centres or comms rooms, seamlessly integrating with existing infrastructure and security controls wherever the boundary of your organisation lies. Centralised, extremely low touch management ensures unparalleled security and confidence is delivered with minimal operational burden and maximum benefits realisation.

## How Garrison helps Government customers

The Garrison SAVI® Isolation Appliance is a unique hardware appliance engineered from the ground up to deliver security and performance at an affordable cost. At the heart of Garrison is our patented Silicon Assured Video Isolation (Garrison SAVI®) technology. The potential uses for Garrison SAVI® extend far beyond web browsing and cross domain access and into the following areas:

- Bridging classified networks and enclaves
- Intelligence sharing and collaboration
- Remote working for classified network access
- Real-time messaging/video apps from unclassified to very sensitive environments
- Network equipment management

## About Garrison

Garrison is leading the way for hardware-based isolation solutions (based on Hardsec and NCDSMO RTB principles) in applications such as secure browsing and cross-domain access. Garrison's isolation solutions, designed to enable cross network collaboration, offer ultra-secure isolation, guaranteed user experience and performance at scale.
